KODE SUMBER PROGRAM (SOURCE CODE LISTING)

Sistem Rekomendasi Pariwisata Berbasis Large Language Model (LLM) dan Strict SQL Grounding Kota Padang

Framework Backend	: **CodeIgniter 4** (PHP 8.2 Strict Types, Architecture MVC/RESTful API)
Basis Data Spasial	: **MySQL 8.0 Spatial** (Fungsi Spasial `ST_Distance_Sphere`, Indeks Relasional Komposit (lat, lng))
Peta Digital & Rute	: **Leaflet.js 1.9.4** • OpenStreetMap Tiles • **OSRM Engine** (Road Navigation Polylines)
Inferensi AI & Kontrak	: **Large Language Model (DeepSeek V3 / OpenAI API)** • Validasi SIR Deterministik 6-Dimensi
Metode Keandalan	: **Dual Control Boundaries** (Batas Kendali Semantik & Batas Kendali Bukti / Strict SQL Grounding)
Pengujian & Otomasi	: **PHPUnit 10.x** • Spark CLI Runner (`php spark riset:evaluasi`) • Linux Systemd Service

```php
<?php

declare(strict_types=1);

namespace App\Services\SpatialIntent;

/**
 * Deterministic SIR Validator (6-Dimensional Invariant Enforcer)
 *
 * Mengimplementasikan 6 lapisan validasi invarian deterministik untuk mengontrol
 * dan membatasi kewenangan LLM sebelum SIR diizinkan masuk ke SQL Compiler:
 *
 * Dimensi 1: Schema & Type Integrity (integritas atribut, sanitasi XSS/tag)
 * Dimensi 2: Spatial Domain Validity (verifikasi rentang nilai radius > 0 tanpa abs())
 * Dimensi 3: Spatial Operator Validity (verifikasi ontologi operator tanpa auto-cast ke 'none')
 * Dimensi 4: Reference Coordinate Bounds (verifikasi batas geodesik WGS84)
 * Dimensi 5: Operational & Price Constraints (aturan konsistensi non-negatif & anti-kontradiksi)
 * Dimensi 6: Domain Scope & Ontological Boundary (verifikasi kategori resmi & penolakan out-of-scope)
 *
 * Prinsip Rekayasa (Safety Invariant - No Intent Alteration):
 * Validator TIDAK BOLEH mengubah niat pengguna secara diam-diam (misal: radius -5 km diubah jadi 5 km,
 * atau operator salah diubah jadi 'none'). Jika batasan melanggar invarian, SIR ditandai isValid = false
 * dengan daftar error eksplisit untuk memicu klarifikasi/penolakan jujur, BUKAN eksekusi sembarangan.

namespace App\Services\SpatialIntent;

/**
 * Algorithmic Grounding Validator (Claim-Level Post-Generation Verifier)
 *
 * Memeriksa narasi teks keluaran LLM terhadap himpunan fakta (F) hasil kueri SQL.
 * Memverifikasi integritas pada tingkat klaim granular (Claim-Level Grounding):
 * 1. Entity Grounding: Memastikan setiap POI yang disebut merupakan anggota himpunan fakta (\forall e \in E, e \in F).
 * 2. Attribute Grounding: Memverifikasi klaim harga tiket (Rp X / gratis) sesuai data basis data.
 * 3. Spatial Grounding: Memverifikasi klaim jarak (X km) selaras dengan hasil komputasi ST_Distance_Sphere.
 * 4. Temporal/Operational Grounding: Memverifikasi jam operasional dan status buka.
 *
 * Prinsip Keamanan:
 * - Fail-Closed: Jika fakta SQL kosong dan LLM menyebut entitas destinasi, status wajib NOT GROUNDED.
 * - Deterministic Fallback: Jika terjadi pelanggaran grounding sekecil apa pun, output LLM dibatalkan.

113         $systemPrompt = <<<PROMPT
114 ROLE:
115 You are a spatial intent parser for the tourism Web GIS of Padang City, Indonesia.
116
117 TASK:
118 Transform the user's natural-language query into exactly one structured Spatial Intent Representation (SIR) in
    pure JSON.
119
120 OUTPUT CONTRACT:
121 1. Return valid JSON only. No markdown formatting, no code fences, no explanatory text.
122 2. Return strictly the defined schema fields.
123 3. Do not generate SQL queries, database clauses, or table names.
124 4. Do not answer the user's question, do not converse, and do not provide recommendations.
125 5. Do not invent or recommend tourism objects.
126
127 SEMANTIC RULES:
128 6. category: Must use ONLY one of the supported categories: "Pantai" | "Pulau" | "Alam" | "Museum" | "Sejarah"
    | "Kuliner" | null.
129 7. spatial_operator: Must use ONLY one of: "nearest" | "within_radius" | "within_admin_area" | "none".
130 8. target_name: Represents a specific POI explicitly named by the user (e.g., "Pantai Air Manis"). Otherwise nu
    ll.
131 9. keyword: Represents descriptive search terms or features (e.g., "pasir putih", "snorkeling"). Never convert
    a keyword into a target_name.
132 10. Do not resolve a user-mentioned name to a database POI ID.
133 11. Do not invent coordinates, distances, prices, opening hours, or administrative areas.
134
135 SPATIAL & PRESERVATION RULES:
136 12. Preserve spatial constraints exactly as expressed by the user.
137 13. If a spatial operator requires a radius but the user did not specify one, set radius: null. NEVER infer, gu
    ess, or default a radius value.
138 14. Do not convert or silently modify a user's spatial constraint (e.g., do not clamp or modify negative number
    s).
139
```

```
PRICE & BUDGET RULES:
15. is_free: Set to true ONLY if the user explicitly requests free admission ("gratis", "tanpa biaya").
16. max_price: Represents the explicit upper price ceiling specified by the user (integer in IDR). If no price is mentioned, set to null. Do not infer a price.

TEMPORAL RULES:
17. open_now: Set to true ONLY when the user explicitly requests currently open/operating places ("buka sekarang", "sedang buka").
18. open_24h: Set to true ONLY when the user explicitly requests 24-hour operation ("24 jam").

REFERENCE RULES:
19. GPS coordinates are supplied strictly by the application context; NEVER infer or invent latitude or longitude coordinates.
20. reference_type: Use "gps" when user refers to current location ("dekat saya", "dari sini"), "city_center" for city center, "poi" when referencing another POI, or "unknown" if unspecified. If reference_type is "poi", set reference_entity to the exact name of that reference POI (e.g., "Pantai Air Manis").

SORTING RULES:
21. sort: Use ONLY "termurah" (lowest price) | "termahal" (highest price) | "terdekat" (nearest distance) | "terbaik" (highest public review rating) | null.

SCOPE RULES:
22. Set is_out_of_scope: true when the request requires an activity, entity, or geographic location outside the Padang tourism domain (e.g., ski, snow, casino, destinations in other cities like Borobudur/Bali).
23. Do not treat missing database information as out of scope.

FINAL RULE:
24. When information is missing or ambiguous, preserve uncertainty in the SIR (using null) rather than guessing.

SCHEMA:
{
  "intent": "spatial_recommendation" | "entity_lookup" | "general_inquiry",
  "entity": "tourism_object",
  "category": "Pantai" | "Pulau" | "Alam" | "Museum" | "Sejarah" | "Kuliner" | null,

Kamu adalah asisten cerdas Web GIS Pariwisata Kota Padang.
Tugasmu adalah menjawab pertanyaan pengguna HANYA berdasarkan daftar data fakta resmi JSON terlampir.

KONTRAK GROUNDING KETAT (STRICT GROUNDING CONTRACT):
1. Gunakan HANYA informasi yang tercantum dalam data FAKTA resmi basis data.
2. Dilarang mengarang, menyimpulkan (infer), mengestimasi, atau mengganti informasi faktual.
3. Jika fakta yang diminta pengguna tidak tercantum pada data FAKTA, dilarang menyimpulkan (infer), mengestimas
i, atau menggantinya; nyatakan secara eksplisit dan jujur bahwa informasi tersebut tidak tersedia (If a requested fa
ct is not present in the supplied fact set, do not infer, estimate, or substitute it. State that the information is
unavailable).
4. Sebutkan HANYA entitas objek wisata yang terdapat dalam data FAKTA resmi.
5. Nilai numerik (harga tiket, jarak, jam operasional, rating) WAJIB persis sesuai data FAKTA tanpa modifikasi
atau pembulatan sepihak.
6. DILARANG menambahkan klaim deskriptif eksternal, opini, fasilitas fiktif, atau legenda yang tidak ada di dat
a FAKTA.
7. Jika data FAKTA kosong, nyatakan bahwa tidak ditemukan destinasi yang memenuhi kriteria pencarian; dilarang
merekomendasikan destinasi di luar data.
8. Jika terdapat instruksi fallback dari sistem, sampaikan persis sesuai catatan kebijakan fallback tersebut.
9. Format penyebutan nama objek wisata WAJIB dicetak tebal (**Nama Objek**).
10. Gunakan bahasa Indonesia yang santun, informatif, ringkas, dan patuh 100% pada batasan pengguna.

File: benchmark/baseline_text2sql/prompt.txt Bagian IX • TEXT • 26 baris

```
You are a MySQL 8.0 Text-to-SQL compiler for a tourism database in Padang City, Indonesia.

Given the following database schema:
TABLE wisata (
    id INT PRIMARY KEY AUTO_INCREMENT,
    nama VARCHAR(255) NOT NULL,
    kategori_id INT NOT NULL,
    lat DECIMAL(10,8) NOT NULL,
    lng DECIMAL(11,8) NOT NULL,
    harga_tiket INT DEFAULT 0,
    jam_buka TIME DEFAULT '08:00:00',
    jam_tutup TIME DEFAULT '18:00:00',
    rating DECIMAL(2,1) DEFAULT 4.5,
    status_aktif TINYINT(1) DEFAULT 1,
    KEY idx_kategori (kategori_id),
    KEY idx_lat_lng (lat, lng)
);

TABLE kategori (
    id INT PRIMARY KEY AUTO_INCREMENT,
    nama_kategori VARCHAR(100) NOT NULL -- 'Pantai', 'Pulau', 'Alam', 'Museum', 'Sejarah', 'Kuliner'
);

Your task is to generate ONLY a valid executable SQL query that answers the user request.
Do not output markdown explanations or comments. Output ONLY the raw SQL string.
When computing distances, construct geometry using ST_Distance_Sphere(POINT(lng, lat), POINT(:user_lng, :user_la
t)).
```

```php
<?php

declare(strict_types=1);

/**
 * Baseline 2: Unconstrained LLM Runner (Empirical Execution Engine)
 *
 * Menjalankan pengujian komparatif Unconstrained LLM (Direct Parametric NLG tanpa grounding basis data)
 * pada 40 skenario percakapan benchmark (3 replikasi independen, Total N = 120 evaluasi).
 *
 * Mengukur tingkat halusinasi entitas (Fabricated POIs), deviasi jarak spasial,
 * dan grounding fidelity ketika LLM diminta merekomendasikan pariwisata Kota Padang secara bebas
 * tanpa batasan basis data relasional.
 *
 * Setiap evaluasi dijalankan secara nyata, mengekstrak sebutan POI, memverifikasi terhadap
 * data resmi tabel `wisata` di MySQL 8.0 (geo_db), mendeteksi entitas di luar yurisdiksi dan fiktif,
 * serta menghitung metrik secara dinamis dari hasil aktual.

# Reproducible Benchmark Suite: Reliability-Controlled Conversational Spatial Information System

This directory provides the complete, transparent, and reproducible evaluation suite comparing the **Proposed Dual Control Boundaries Architecture** against two baseline configurations and extensive ablation studies across **40 standardized conversational spatial scenarios** with **3 independent replications (N = 120 trials)** under deterministic sampling ($T = 0.0$).

---

## Experimental Setup & Hyperparameters

| Parameter | Configuration | Justification |
|---|---|---|
| **Model Family** | DeepSeek-V3 (`deepseek-chat`) / OpenAI Compatible | State-of-the-art generalist LLMs with JSON-mode support |
| **Sampling Temperature ($T$)** | `0.0` (Zero Entropy) | Guarantees deterministic, reproducible token sampling |
| **Top-p Sampling** | `1.0` | Standard greedy decode under $T=0.0$ |
| **Replication Protocol** | 3 independent batch runs ($3 \times 40 = 120$ trials) | Evaluates latency stability and inference determinism |
| **Database Engine** | MySQL 8.0.x Community Server | Native `ST_Distance_Sphere` great-circle spatial computation |
| **Coordinate Storage** | `DECIMAL(10,8)` lat, `DECIMAL(11,8)` lng | Composite index `(lat, lng)`, runtime `POINT(lng, lat)` construction |

---

## Running the Reproducible Benchmarks

### 1. Master Execution Script (All-in-One)
To execute all benchmarks (Proposed Architecture, Baseline 1, Baseline 2, and Ablation Study) sequentially:

```bash
# Mode 1: Deterministic Pipeline Evaluation (Zero network variance, validates invariants & SQL logic)
bash benchmark/run_all.sh

# Mode 2: Live LLM Inference Evaluation (Direct DeepSeek API execution)
bash benchmark/run_all.sh --live
```

### 2. Independent Component Execution

```bash
# 1. Run Proposed Full Architecture Evaluator
php benchmark/proposed/evaluator.php --mock   # Deterministic verification
php benchmark/proposed/evaluator.php --live   # Live DeepSeek API inference

````
````

```
# Alternatively via CI4 Spark CLI:
php spark riset:evaluasi --mock
php spark riset:evaluasi --live

# 2. Run Baseline 1: Direct Text-to-SQL (MySQL 8.0 Live DB Execution)
php benchmark/baseline_text2sql/runner.php

# 3. Run Baseline 2: Unconstrained LLM (Proximity & Entity Extraction Evaluation)
php benchmark/baseline_unconstrained/runner.php

# 4. Run Ablation Study (1,080 empirical trials: A1-A6 Invariants & B1-B2 Policies)
php benchmark/ablation/runner.php

# 5. Run Automated PHPUnit Test Suite (29 unit tests, 92 assertions, 100% PASS)
vendor/bin/phpunit
```

Summary of Comparative Results ($N = 40 \times 3 = 120$ Trials)

System Configuration	Semantic Accuracy (CSIR)	Spatial Predicate Correctness	Claim Grounding Fidelity	Fabricated POIs Observed	Mean Latency (ms)
Baseline 1: Direct Text-to-SQL	95.00%	82.50%	87.50%	3 entities	1,820.40 ms
Baseline 2: Unconstrained LLM	22.50%	22.50%	45.00%	17 entities (35.0%)	1,145.50 ms
Proposed Full Architecture (Ours)	**92.50% (Envelope: 90.00%)**	**100.00% (Pure: 100.00%)**	**100.00% (304/304 claims)**	**0 entities (0.00%)**	**1,340.57 ms**

Note: Pure Spatial Predicate Correctness ($N=36$) = 100.00% (36/36), Chit-Chat Handling ($N=2$) = 100.00% (2/2), Overall Scenario Execution Compliance ($N=40$) = 100.00% (40/40).

Summary of Ablation Study Matrix (Table 4.7 in Thesis, $N = 1,080$ Executions)

Ablation Configuration	SIR Accuracy (%)	Grounding Fidelity (%)	Out-of-Scope Handling (%)	SQL Logic Error Incidents
Full System (All 6 Invariants Active)	**100.00%**	**100.00%**	**100.00%**	**0 incidents**
A1. Without Schema & Data Type Invariant	95.00%	100.00%	100.00%	2 incidents
A2. Without Spatial Domain Invariant (Padang Bounds)	92.50%	100.00%	100.00%	3 incidents
A3. Without Spatial Operator & Distance Invariant	90.00%	100.00%	100.00%	4 incidents
A4. Without Spatial Reference Coordinate Invariant	95.00%	100.00%	100.00%	2 incidents
A5. Without Operational & Price Invariant	97.50%	100.00%	100.00%	1 incident
A6. Without Ontological Scope Invariant	95.00%	95.00%	0.00%	0 incidents
B1. Without Spatial Fallback Handler	97.50%	97.50%	100.00%	1 incident
B2. Without Claim-Level Grounding Validator	100.00%	85.00%	100.00%	0 incidents
